# THE GALAXY GAZEBO

GARDEN FURNITURE CENTRE.

EST. 1991

# A NEW ERA OF GAZEBO

Our Galaxy Gazebo is setting the trend in modern gazebo design.

The design is simplistic but feels highly contemporary which will certainly enhance the feel of any outdoor space.

The main frames and roof shutters are made from toughened aluminium with a charcoal grey powder coating that adds to this contemporary feel.

The Gazebo is resistant to winds up to 120km/h & even snow.

## SO WHY THE GALAXY?

The Galaxy Gazebo is perfect for alfresco dining, even in the colder, wetter weather. You can also use the gazebo to house your hot tub.

## THE LOUVERED ROOF

The louvered roof is a key feature of the Galaxy's unique design. Two easy mechanisms are located on the back two corners of the gazebo which wind the roof shutters to open and close, to allow both air and light to enter when required

The mechanisms that facilitate this gazebo are robust and built to last so they won't fail over time.

## THE DRAINAGE SYSTEM

Another clever part of this gazebo is the drainage system. When the shuttered roof is completely closed, water will run into the drainage channels housed within the shuttered roof sections and then continue to run down inside the legs, finally exiting out of the bottom into the anchored surface.

The drainage channels are cleverly designed for discreet disposing of excess rain water.

## THE SIDE SCREENS

Made from textilene, the screens can be rolled down to the required length for extra privacy and protection. Slightly transparent, they are a unique feature of the Galaxy gazebo.

Unrivalled for strength and beauty, textilene is made of PVC coated woven polyester non-stretch yarn which is not only very strong, but extremely visibly attractive.

It's also flame retardant, heat sealable, mildew resistant and stable under either hot or cold temperatures!

Textilene requires minimal maintenance, whilst the colours will remain crisp and vibrant after years of continuous outdoor exposure. That's why it's perfect for the Galaxy!
