BIOCLIMATIC PERGOLA RANGE

WHY CHOOSE THE PERGOLUX?

Are you looking for the missing piece to complete your outdoor living space? Create a brand-new private home area with our Bioclimatic Pergola gazebos to make your ideal outdoor living space!

THE DOORS

As well as the robust aluminium structure, our Pergolux gazebos can be fitted with optional glass sliding doors which effortlessly lock within the frame to create a solid glass wall! With a 10mm thickness, the toughened glass will withstand any weather conditions without any damage! Undoubtedly, the glass doors provide the elegance and chicness that our Pergolux range represents!

THE ROOF

The motorised roof is a significant feature of our Pergolux design. A remote is also included to control the optional warm white LED lights within the roof! The roof is tailored to trap heat to keep you warm within the winter months, or can fully open to immediately expel any unnecessary excess heat. Our Bioclimatic Pergolas have been upgraded with the optional new addition of our custom-fitted RGB lights fitted around the perimeter to enhance your gazebo experience!

With total bespoke control, our Bioclimatic Pergolas provide you with the freedom to produce your dream gazebo right at your fingertips! Our bespoke option also allows you to customise your outdoor area with unique modern technology to regulate direct sunlight and temperature control all year round.

THE DRAINAGE SYSTEM

Much like our Galaxy Gazebo range, the Pergolux is fitted with our faultless drainage system. The rain is collected through an internal guttering system which is transported down the front two legs. The rainwater is then dispersed through a 2-inch drainpipe to allow a clean and efficient disposal with minimal complications.
