## THE PERGOLUX RANGE

Our Pergolux Gazebos are an exceptional addition to any outdoor space. Its attractive and stylish design will undoubtedly leave your garden enriched with elegance and sophistication all year round! The tough, rust resistant aluminium exterior is carefully coated with a charcoal grey powder that requires minimal maintenance when exposed to any weather conditions. Additionally, you can choose to have either Anthracite Grey or Traffic White for both the frame and the roof to accommodate your own personal preferences. What's more, our Pergolux Gazebos are completely bespoke to make sure all your needs are met with you in complete control!

# Why Choose the PERGOLUX?

The Pergolux Gazebo has many fantastic features that will transform your garden space! Primarily, you can choose to have your Pergolux wall mounted or free standing, with the additional option to have a single or double bay roof. You can have the sides left open or alternatively you can opt for motorised screens or sliding glass doors; the choice is completely yours! Fundamentally, the Pergolux can be situated on any surface, as long as it is relatively flat and stable.

## The Remarkable Features of the Pergolux

### THE ROOF

The motorised roof is a significant feature of our Pergolux design. The remote is fully operational to control the optional warm white LED lights within the roof! The roof is fully tailored to entrap heat to keep you warm within the winter months, or alternatively can fully open to immediately expel any unnecessary excess heat.

### THE DOORS

As well as the robust aluminium structure, our Pergolux Gazebos can be fitted with optional glass sliding doors which effortlessly lock within the frame to create a solid glass wall! Measuring at a 10mm thickness, the toughened glass will withstand any weather conditions without any uncertainty of damage! Undoubtedly, the glass doors can provide a fundamental asset to the elegance and chicness that the Pergolux represents!

### THE DRAINAGE SYSTEM

Much like our Galaxy Gazebo range, the Pergolux is fitted with our faultless drainage system. The rain is collected through an internal guttering system which is transported down the front two legs. The rainwater is then dispersed through a 2-inch drainpipe to allow a clean and efficient disposal with minimal complications.
